*2 Data only for group companies in Japan

*3 The scope of calculation of "the amount of waste treated by incineration with energy recovery" was changed from FY2022. The total amount of waste generated, which is the sum of "total amount of waste reused/recycled" and "total amount of waste treated," remains unchanged.

| | | Category 14 Franchises | 10,000 t-CO2 | 6 |
| | | Category 15 Investments ^{*8} | 10,000 t-CO2 | 0 |

*5 Category 8 (leased assets (upstream)) was excluded from the calculation because fuel and electricity used by leased assets have already been calculated in Scope 1 or 2.

*6 Category 9 (transportation and delivery (downstream)) was excluded from the scope of calculation because most of the emissions are from in-house logistics and in-house facilities (calculated under Scope 1 or 2) and contracted transportation (calculated under Category 4).

*7 Category 10 (processing of products sold) was excluded from the calculation because NTT Group's main business does not process intermediate products.

*8 Effective from FY2022 actual data, the method of recording emissions in Category 3 was changed from Category 15. In accordance with this change, we have retroactively applied the change in accounting method to data for FY2021 and earlier, and revised the figures.
